ABOUT US

We Proudly Present An Innovative Digital Solution Tailored Exclusively For The Restaurant Industry. Our System Empowers Restaurant Owners And Managers To Streamline Operations, Enhancing The Dining Experience Right From The Table. Experience Efficiency And Elegance Combined.

ABOUT OUR SYSTEM

Our System Has Been Categorized In 3 Domains:

- **CUSTOMER ORDER PORTAL**
Offering guests an immersive menu exploration, effortless ordering, and the luxury of table reservations.
- **MANAGING APPLICATION**
A dedicated tool for waitstaff to process orders and for leadership to gain real-time insights into restaurant activities.
- **ADMIN PORTAL**
A powerful backend hub allowing comprehensive control over settings, menu updates, staffing, and order logistics.

CUSTOMER SIDE PORTAL

The Customer-Side Portal Is A Gateway To A Seamless Dining Experience.

With Our User-Friendly Platform, One Can Effortlessly Browse The Restaurant's Menu, Place Orders, And Make Reservations From The Convenience Of A Smartphone.

- Customers scan a QR code and are redirected to the system.
- Upon logging in, customers enter an OTP provided by the waiter.
- Customers can place food and drink orders and view their running bills

THE MANAGING APPLICATION

The managing portal is a powerful tool that provides restaurant owners and managers with essential functionalities to efficiently run their establishment. This portal typically includes features for order processing, monitoring activities, table allocation and analytics, among others. It serves as the central hub for overseeing day-to-day operations, optimizing efficiency, and making data-driven decisions to ensure the success of the restaurant.

FEATURES

- User-Friendly Menu Browsing
- Order Placement
- Reservation Booking
- User Authentication

USECASES

- **Order Management:** Waiters can use the mobile app to easily take and modify customer orders, specify special requests, and send them to the kitchen instantly.
- **Real-Time Order Updates:** Managers can monitor the progress of orders in real-time, ensuring that orders are prepared and delivered promptly. They receive notifications when orders are ready for serving.
- **Table Assignments:** Waiters can assign customers to specific tables, making it easy to keep track of occupied and available seating.

THE ADMIN PORTAL

A restaurant service system admin portal is a user-friendly, online platform that empowers restaurant management to oversee and control essential functions within the restaurant, from menu management to staff scheduling and customer data analysis.

FEATURES

- User authentication and role-based access control
- Menu management
- Staff management
- Order monitoring and management
- Real-time dashboard with analytics
- Reservation management

USECASES

- **User Authentication and Role-Based Access Control:** Admins can manage staff accounts and assign roles with varying levels of access to the admin portal.
- **Menu Management:** Admins can easily update the menu, add new items, set prices, and mark items as available or out of stock.
- **Staff Management:** Admins can add, edit, or remove staff members, assign tables to waiters, and track their performance.
- **Order Monitoring and Management:** Admins have a comprehensive view of all active orders, can reassign orders, and resolve any order-related issues.
- **Real-Time Dashboard with Analytics:** Admins can access real-time analytics and dashboard data, such as sales trends, customer feedback, and staff productivity.

NAVIGATING THROUGH THE SYSTEM

CUSTOMER SIDE PORTAL

The customer can scan a QR code and signin to enter the system

An OTP will be asked which will be provided by the staff from his/her portal

The customer can place the order as per requirements

And hence confirm it via the cart

MANAGEMENT APP

There are three domains within the application one for the waiter, one for food and other for drink manager

If we login in the waiter section he can generate otp and bills, make a confirmation on serving.

The food and drink manager can accept the order, update the cooking status and see the serving status

The Waiter can confirm the table using the OTP generated

ADMIN SIDE PORTAL

The main, food and drinks admin can login using there ids

There are many functionalities of an admin page

One of the functionalities is that you can check out the orders by date.

The websites are responsive hence, can be easily operated via tablets, laptops and mobile phones.

HANDOVER TO THE CLIENT AND TRAINING

We will provide demo videos to assist the waiter and managers/board members on how to use our application

CUSTOMER TESTIMONIAL

Country Club in Shivamogga, Karnataka is one of our valued customers. The easy-to-use interface has been a hit among our patrons, and the backend features have empowered our staff to serve with increased efficiency. The system's adaptability to the unique needs of our club setting has been truly commendable. We are delighted with the transformation this solution has brought to our establishments and would highly recommend it to any venue looking to embrace the future of dining.

This customized solution has been designed to cater to the needs of 5000 users in their community.

MAINTENANCE

We are committed to providing full maintenance and support for our Food and Bar System Software to ensure that it continues to operate smoothly and efficiently for Shivamogga City in Karnataka. Our maintenance services include regular updates, bug fixes, and technical support to address any issues that may arise. Our goal is to keep the system running optimally, so our valued customers can rely on it for their day-to-day operations without interruption. We are dedicated to maintaining a strong and long-lasting partnership with Shivamogga City and are always ready to assist with any maintenance needs they may have.

SECURITY CONSIDERATIONS & SCALABILITY

- Authentication and authorization mechanisms to secure user data and access.
- Encryption for data transmission over WebSocket connections.
- Regular security audits and updates to address vulnerabilities.
- The application should be designed with scalability in mind, allowing for increased user loads and restaurant expansion.

TECHNICAL SPECIFICATIONS

TECH STACK

real-time communication

- websocket: used for real-time order status updates and notifications across all components.

customer website

- framework: react
- integration: websocket for real-time order status updates
- deployment: hosted on a web server

waiter and manager client app

- framework: flutter
- platform: ios and android
- integration: websocket for real-time updates
- deployment: app store (ios) and google play store (android)

admin portal

- framework: next.js
- integration: websocket for real-time order updates
- deployment: aws with serverless deployment options for scalability

TESTING AND QUALITY ASSURANCE

- Rigorous testing, including unit, integration, and user acceptance testing.
- Continuous integration and continuous deployment (CI/CD) pipeline for automated testing and deployment

CONCLUSIONS

The restaurant management application will provide an efficient and real-time experience for both restaurant staff and customers. It leverages modern technologies like Flutter, React, and Next.js along with AWS infrastructure to ensure scalability, reliability, and security. MongoDB serves as the robust database solution for managing restaurant data. Regular updates and maintenance will ensure the application's continued success in the restaurant industry.

This technical specification outlines the architecture, technologies, and features of the restaurant management application, taking into account scalability, security, and quality assurance considerations.
